

US Gov asks Anthropic to ban 'foreign national' access to Fable, Mythos

CyberIntel Threat Advisory - automated analysis of source reporting: affected systems, actor attribution, and recommended actions.

INTELLIGENCE SNAPSHOT

Issued by	CyberIntel
Date	15 June 2026
Source	bleepingcomputer
Threat Level	UNKNOWN
Affected Systems / Vendors	Anthropic Fable 5 (AI model), Anthropic Mythos 5 (AI model), Anthropic Claude Opus 4.8 (AI model version 4.8)
Threat Actors	-
CVEs	None identified

Classification	For Authorised Recipients

Executive Summary

Anthropic suspended access to its Fable 5 and Mythos 5 AI models globally after a U.S. government export control directive required the company to block any foreign national, including its own employees, from using the models. The directive, issued on June 12, cites national security concerns and effectively forces a blanket shutdown of the two models for all customers, while leaving other Anthropic offerings such as Claude Opus 4.8 untouched. Fable 5, a safeguarded version that filters cybersecurity, biology and chemistry queries, was only three days old when it was taken offline, whereas Mythos 5, an unrestricted model intended for vetted government and life science partners, also lost access. Anthropic contends that the alleged jailbreak that triggered the order was a minor, already known vulnerability that other publicly available models can reproduce, and it argues that applying such a standard industry-wide would halt frontier model deployment. The company maintains the action is a misunderstanding, is working to restore access, and has pledged further details within 24 hours, while the broader implication highlights tensions between export control policy, AI safety, and the global availability of powerful models. The episode also underscores the need for organizations to reassess model access controls and to prepare migration paths to alternative, compliant AI services.
